

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A computer readable ~~recording~~-medium having a data structure for managing reproduction of at least still images recorded on the computer readable ~~recording~~ medium, comprising:

a data area storing at least one still image in a first file and audio data in a second file;

and

a playlist area storing at least one playlist, the playlist linking the first and second files,

wherein

the playlist includes navigation information providing presentation information regarding the first and second files,

the playlist includes first navigation information providing presentation information regarding the still image in the first file, and second navigation information providing presentation information regarding audio data in the second file,

one of a playitem field and a sub-playitem field provides the first navigation information,

the one of the playitem field and the sub-playitem field providing the first navigation information includes an indicator indicating that the one of the playitem field and the sub-playitem field providing the first navigation information provides information for still image presentation,

one of a playitem field and a sub-playitem field provides the second navigation information, and

the one of a playitem field and a sub-playitem field providing the first navigation information is different from the one of a playitem field and a sub-playitem field providing the second navigation information.

2. (Canceled)

3. (Canceled)

4. (Canceled)

5. (Canceled)

6. (Currently Amended) The computer readable ~~recording~~-medium of claim 1[[4]], wherein the one of the playitem field and the sub-playitem field providing the first navigation information includes an indicator indicating a duration for displaying the still image.

7. (Currently Amended) The computer readable ~~recording~~-medium of claim 1[[4]], wherein the one of the playitem field and the sub-playitem field providing the first navigation information includes an indicator indicating whether to display the still image for an infinite duration.

8. (Currently Amended) The computer readable ~~recording~~-medium of claim 7, wherein the indicator indicates to display the still image for an infinite duration until user input to change from the still image is received.

9. (Currently Amended) The computer readable ~~recording~~-medium of claim 1[[4]], wherein the one of the playitem field and the sub-playitem field providing the first navigation information includes identifiers identifying a clip of data including the still image.

10. (Canceled)

11. (Canceled)

12. (Currently Amended) The computer readable ~~recording~~-medium of claim 1[[11]], wherein the playlist further includes mark information, and the mark information includes a mark pointing to the still picture.

13. (Currently Amended) The computer readable ~~recording~~-medium of claim 1[[3]], wherein the playlist further includes mark information, the mark information includes a mark pointing to the still picture.

14. (Currently Amended) A computer readable ~~recording~~-medium having a data structure for managing reproduction of at least still images recorded on the computer readable ~~recording~~ medium, comprising:

a data area storing at least one still image and audio data in separate files;

a playlist area including a playlist, the playlist including a first one of a playitem and a sub-playitem that provides navigation information regarding the still image, the playlist including a second one of a playitem and a sub-playitem that provides navigation information regarding the audio data, wherein

the first one of a playitem and a sub-playitem is different from the second one of a playitem and a sub-playitem.

15. (Currently Amended) A method of reproducing a data structure for managing reproduction of at least still images recorded on a recording medium, comprising:

reproducing at least one playlist from the recording medium, the playlist linking first and second files, the first file including at least one still image and the second file including audio data, wherein

the playlist includes navigation information providing presentation information regarding the first and second files,

the playlist includes first navigation information providing presentation information regarding the still image in the first file, and second navigation information providing presentation information regarding audio data in the second file,

one of a playitem field and a sub-playitem field provides the first navigation information,
the one of the playitem field and the sub-playitem field providing the first navigation information includes an indicator indicating that the one of the playitem field and the sub-playitem field providing the first navigation information provides information for still image presentation,

one of a playitem field and a sub-playitem field provides the second navigation information, and

the one of a playitem field and a sub-playitem field providing the first navigation information is different from the one of a playitem field and a sub-playitem field providing the second navigation information.

16. (Currently Amended) An apparatus for reproducing a data structure for managing reproduction of at least still images recorded on a recording medium, comprising:

a driver for driving an optical reproducing device to reproduce data recorded on the recording medium;

a controller for controlling the driver to reproduce at least one playlist from the recording medium, the playlist linking first and second files, the first file including at least one still image and the second file including audio data, wherein

the playlist includes navigation information providing presentation information regarding the first and second files,

the playlist includes first navigation information providing presentation information regarding the still image in the first file, and second navigation information providing presentation information regarding audio data in the second file,

one of a playitem field and a sub-playitem field provides the first navigation information,
the one of the playitem field and the sub-playitem field providing the first navigation information includes an indicator indicating that the one of the playitem field and the sub-playitem field providing the first navigation information provides information for still image presentation,

one of a playitem field and a sub-playitem field provides the second navigation information, and

the one of a playitem field and a sub-playitem field providing the first navigation information is different from the one of a playitem field and a sub-playitem field providing the second navigation information.

17. (Currently Amended) A method of recording a data structure for managing reproduction of at least still images recorded on a recording medium, comprising:

recording a first file including at least one still image and a second file including audio data in the recording medium; and

recording at least one playlist in the recording medium, the playlist linking the first and second files, wherein

the playlist includes navigation information providing presentation information regarding the first and second files,

the playlist includes first navigation information providing presentation information regarding the still image in the first file, and second navigation information providing presentation information regarding audio data in the second file,

one of a playitem field and a sub-playitem field provides the first navigation information,
the one of the playitem field and the sub-playitem field providing the first navigation information includes an indicator indicating that the one of the playitem field and the sub-playitem field providing the first navigation information provides information for still image presentation,

one of a playitem field and a sub-playitem field provides the second navigation information, and

the one of a playitem field and a sub-playitem field providing the first navigation information is different from the one of a playitem field and a sub-playitem field providing the second navigation information.

18. (Currently Amended) An apparatus for recording a data structure for managing reproduction of at least multiple reproduction path video data on a recording medium, comprising:

a driver for driving an optical recording device to record data on the recording medium;

an encoder for encoding at least multiple reproduction path video data; and

a controller for controlling the driver to record a first file including at least one still image and a second file including audio data in the recording medium, and for controlling the driver to record at least one playlist in the recording medium, the playlist linking the first and second files, wherein

the playlist includes navigation information providing presentation information regarding the first and second files,

the playlist includes first navigation information providing presentation information regarding the still image in the first file, and second navigation information providing presentation information regarding audio data in the second file,

one of a playitem field and a sub-playitem field provides the first navigation information,

the one of the playitem field and the sub-playitem field providing the first navigation information includes an indicator indicating that the one of the playitem field and the sub-playitem field providing the first navigation information provides information for still image presentation,

one of a playitem field and a sub-playitem field provides the second navigation information, and

the one of a playitem field and a sub-playitem field providing the first navigation information is different from the one of a playitem field and a sub-playitem field providing the second navigation information.
